Mohammad Amin Sadeghi

Backend Developer | Node.js & TypeScript

Tehran, Iran | +98 991 586 7462 | amin0xa1b@gmail.com | LinkedIn | GitHub

About me

Backend developer focused on Node.js, with hands-on experience designing and building RESTful APIs, authentication systems, and real-time features across several complete projects, including three that are live in production. I write clean, well-structured, maintainable code and follow solid practices for API security and error handling. Currently deepening my backend architecture skills with Nest.js to build more structured, production-style APIs.

Technical Skills

Backend	Node.js, Express.js, Nest.js, Fastify, RESTful API Design
Database	MongoDB, Mongoose ODM, Schema Design, CRUD Operations
Auth & Security	JWT Authentication, Session-Based Auth, RBAC, Password Hashing, Input Validation
Architecture & Patterns	MVC Architecture, Modular Architecture, Service/Repository Pattern, Singleton Pattern, Centralized Error Handling
Real-Time	WebSocket, Socket.io, Redis Caching
Tools & Deployment	Git, GitHub, GitLab, Postman, Railway, Render
Other Skills	Progressive Web Apps (PWA), Service Workers, Regular Expressions (RegEx), Canvas API (JavaScript)

Projects

WhatyWhaty - Real-Time Social Messaging Platform

A Twitter-style app for real-time posts and conversations, built with Node.js and Fastify.

- Structured the app as a modular plugin architecture, with routes, services, models, and validators as separate layers
- Implemented JWT authentication and role-based access control (RBAC) to secure user accounts and permissions
- Added Redis caching to cut down repeated database queries and improve response times
- Built server-side rendered pages with EJS for the app's feed and messaging views

Live demo: whatywhaty-production.up.railway.app

GitHub: whatywhaty-on-github

Gym Invoice System (Faktorito)

Designed and built a full invoicing platform for a gym business; live and deployed.

- Built session-based authentication with role-based access control (RBAC)
- Implemented full CRUD operations with MongoDB, including input validation
- Used MVC architecture with centralized error handling

Live demo: faktorito-production-95e0.up.railway.app

GitHub: faktorito-on-github

URL Shortener & Analytics (MakeItShorter)

A URL shortening platform built with Fastify, with analytics for tracking link activity.

- Built a URL shortening service with Fastify and MongoDB
- Built server-side rendered pages with EJS
- Implemented real-time click tracking with Socket.IO

Live demo: makeitshorter-production.up.railway.app

GitHub: makeitshorter-on-github

Static File Manager (Peek)

A lightweight Node.js file management tool for browsing and managing static files through a web interface.

- Built file handling and server-side operations with Node.js
- Added support for managing static assets and browsing directory structures

Code: github.com/aydope/peek

Package on npm: npmjs.com/package/peek

Education

Associate Degree Student in Software Engineering — University of Applied Science and Technology

Personal Strengths

- Responsible and detail-oriented in project execution
- Keeps clear documentation and follows software engineering standards
- Team player with strong problem-solving skills and a good grasp of algorithms
- Committed to continuous learning - currently deepening backend architecture skills with Nest.js
- Uses AI tools purposefully as a coding assistant to work more efficiently
